

## 10. How are we preparing learners for digital workplaces?

- » In their learning and development, learners use professional tools and encounter digital practices relevant to their work role, practices and service area.
- » ePortfolio system(s) allow learners to curate and showcase their learning achievements.
- » Learners can also evidence digital activities and skills outside of formal, certificated learning, eg through open badges etc.
- » Learners build a professional profile or portfolio that they can take on with them into future education, employment etc.
- » Digital technology is used to support learners on placements and in work-based learning.
- » Operational managers are engaged in the digital learning as appropriate: eg providing online masterclasses and guest lectures; assessing or verifying evidence of learning in digital formats etc.

Enhancing the digital learner experience: a self-assessment framework
